UNDERLAY SYSTEMS

The Jumpax® Family consist out of several fast-track floor preparation systems.
Each of them is designed to perfectly compliment a specific type of floor finish and/or base floor situation. Therewith providing the ideal blend of support and surface quality for a prolonged life and enhanced appearance.

Our promises

Acoustic, fast track floor prep system for all resilient floor coverings

- Reduces installation time and costs
- Instant floor levelling with superb smooth finish
- Excellent sound reduction
- For the immediate glue-down of LVT, vinyl, linoleum, rubber, carpet, cork, etc.
- Overcomes many substrate problems

FSC® www.fsc.org FSC® C154437 The mark of responsible forestry

For us at Unifloor, the use of FSC® certified wood is very important. Environmentally and social appropriate use of the forest means that the forest's productivity, biodiversity and ecological processes are maintained while harvesting the wood. By using FSC wood, we are helping to promote responsible forest management. Therefore Unifloor solely uses raw materials from FSC certified sources.

The two self-adhesive components are quickly and easily fitted as a free-floating sub-floor, instantly smoothing over typical irregularities and eliminating the need for screeds, primers, ply boards and nails. It is not necessary to remove old floor coverings, loose screeds or even surface contamination. Failures of new floors due to problem substrates, minor cracks or laitance become a thing of the past. Using Jumpax® saves considerable time and money.

Jumpax® solutions

IMPACT SOUND REDUCTION
- 21 dB*
i.c.w. LVT/Linoleum

Jumpax® Classic

10 mm

- Acoustic fast-track subfloor prep for all glue-down resilients
